

The directory below contains information on quality control tests undertaken at HFL on behalf of the supplement manufacturers listed. The directory is intended only as an information service for consumers to allow them to make a more informed choice about the products they are taking. It is not a recommendation for the consumption of these, or any other, supplement products.

Products appearing on this list have been tested for the presence of certain drugs (contact HFL for details of current testing regimen) and, within the limitations of the test, none were found.

Please be aware that the results of this test apply only to the portion of the product tested and cannot be extrapolated to any other batches of the product.

Prospective users of any product on this list should be aware that inclusion on the list is not a guarantee that the use of a product will not result in a positive dope test. Ultimate responsibility lies with the user and this should be considered by anyone choosing to use dietary supplements.

Below is the list of products tested using the HFL nutritional supplement screen.
