

LGC Environmental Policy

LGC is a company with over 175 years' experience in analytical science acting on behalf of both public and private sector clients. As such, LGC is aware of and accepts the environmental responsibilities placed upon it.

LGC is committed to the continual improvement of its environmental performance and aims to operate an Environmental Management System (EMS) aligned with ISO 14001 principles. This Environmental Management System will provide the framework for setting and reviewing environmental objectives and targets.

LGC is committed to complying with all applicable legal and other national and local environmental requirements. LGC is also committed to the protection of the environment by integrating the prevention of pollution within the management of its business operations and reducing the environmental impact of its activities in order to protect the health and safety of employees and surrounding communities and ecosystems.

LGC has appointed environmental personnel across various levels within the organization, with a remit to advise on and monitor compliance with statutory requirements, instigate the adoption of best practice and seek ways in which LGC can improve its environmental performance.

The control of energy and materials consumption, along with the responsible management of our waste, are key to LGC's efforts to improve environmental performance and reduce our Carbon Footprint.

Energy

LGC endeavors, where possible, to match its energy usage to its business requirements, making sure that waste is reduced and patterns of demand are optimised. All staff receive environmental awareness training in order to play an active role in reducing energy consumption.

Waste Streams

LGC waste production activities are aligned with waste hierarchy principles. When production of waste is unavoidable, we operate a waste segregation policy. Where possible, waste is re-used or sent for re-cycling rather than landfill. The reduction in the generation of waste materials is at the forefront of LGC's operating procedures in reducing our impact on the environment.

All LGC staff and contractors working at LGC sites are required to adhere to the requirements of the Environmental Management System and to be aware of the contents of this policy.

The Environmental Policy will be communicated to all employees and made publicly available.
